## Suncorp CIO starts new role

Suncorp's new Chief Information Officer (CIO) Sarah Harland says the company is well placed to take advantage of its digital capability and technologies as the financial services sector continues to experience one of the most significant transformations in its history.

Ms Harland, who has more than 20 years of global experience in technology across a range of industries, including financial services, says she is excited about taking up her new role at the organisation today.

She will lead Suncorp's technology and business intelligence strategy, with responsibility for all technology, digital enablement, cloud and infrastructure, security, Chief Data Office, projects and programs, and innovation labs function.

"Suncorp is a strong financial services conglomerate with a unique offering of insurance, banking and wealth products," she said.

"There's a great culture built around the customer supported by a technology group with an outstanding reputation for agility and delivery.

"By leveraging its digital technologies, Suncorp has the scale and financial capability to take on the competition and deliver its offering to a wider group of customers."

Welcoming Ms Harland to Suncorp, CEO and Managing Director Michael Cameron says he is confident her leadership and track record in similar roles will help take the organisation to the next level.

"Technology is critical to deliver our Suncorp marketplace which offers our customers personalised experiences and solutions aimed at solving their problems and meeting more of their needs," Mr Cameron said.

"Sarah is a recognised global leader in her field and I'm looking forward to the contribution she will make."
